### **DETAILED ACTION**

Applicant's election without traverse of species A (claims 1-8 and 16) in the reply filed on 01/17/2006 is acknowledged.

#### ***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.
- 2.

#### ***Specification***

3. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

#### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1, 8 and 16 are rejected under 35 U.S.C 102(e) as being anticipated by Hirakata et al., US Patent No. 5,977,562.

The above claims are anticipated by Hirakata et al. figure 11 and accompanying text which disclose an in-plane switching type liquid crystal display (LCD) device comprising:

Art Unit: 2871

- . a gate line (101);
- . a data line (102);
- . a thin film transistor (100);
- . a common line (104);
- . a pixel electrode (331) as claimed;
- . a common electrode (332) as claimed;
- . a liquid crystal layer inherently formed between the pixel electrode and the common electrode and having orientation directions different from neighboring domains (due to the shape of the pixel/common electrode).

It should be noted that the method of forming the device is merely a list of forming each component and each component must be formed to make the device; therefore, the method of manufacturing would be inherent to the device.

### ***Double Patenting***

6. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned

Art Unit: 2871

with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

7. Claims 1-8 and 16 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 11, 15-17 of the US Patent Application Publication No. 2005/0128409. Although the conflicting claims are not identical, they are not patentably distinct from each other because both application and patent disclose a LCD device having a same in-plan switching type LCD, in which a pixel electrode, a common electrode having a ring-shaped and a capacitor electrode as claimed.
